

product: agrotube™

CASE STUDY FOR POMEGRANATE & ORANGE - AUGUST 2014

Where

Argoliko, Area of Nafplion, Peloponnese

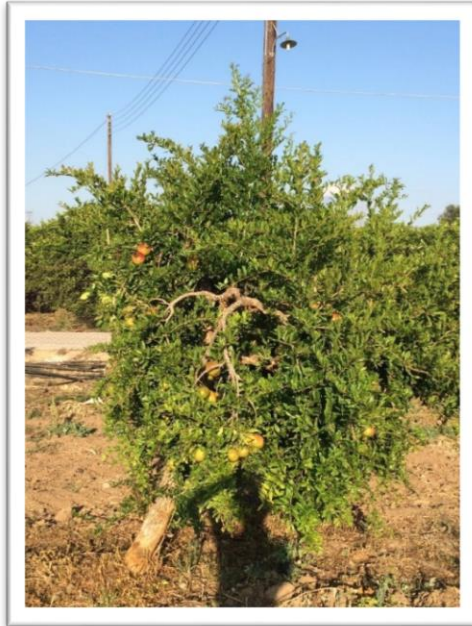

Who

Sotiris G.
large producer of citrus

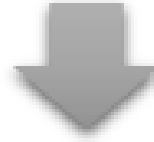

Summary

Plants irrigated with water magnetised through the agrotube™ produced amazing comparable yield results revitalising dying plants.

By using the agrotube™ pomegranates yielded overproduction with much more developed plants & much more livelier whilst leaves are more dark green and healthier.

Without agrotube™

Orange trees of four breed of species, which were vaccinated pre six months, having been irrigated with agrotube™ for 40 days yielded growth which exceeded 1.5 year plants.

January 2014 - dried lemon tree **alive** after two months of watering with agrotube™
