## CASE STUDY FOR POTATO & ONION JUNE 2013

### Where

Elateia, Fthiotida district, middle Greece

### Who

Panayiotis K.  
farmer, large producer of vegetables

### Summary

Potatoes and onions irrigated with water magnetised through the agrotube™ nearly doubling the quantity and producing an amazing quality produce.

**"A tool that any farmer would be lost without!"**

**- Panayiotis**

Below is a clear example of results anyone can achieve, with potatoes & onions grown on magnetic water by using the agrotube™.

Initially, the potato, having been watered with magnetic water, cooks much faster, the health nutrients of the potato are absorbed by the body much more efficiently, and the taste is much more superior to that of normal potatoes and it keeps its real flavor. When buying such potatoes, they can easily be distinguished from potatoes grown under normal conditions or traditionally by use of nitrates.

A magnetic water grown potato is smooth, without bumps, and looks healthy. In terms of color, the inside of the potato is smooth, soft and has a pleasant healthy color. A potato grown without the use of magnetic water, has a varying different shade of color, that is, from the edge a darker (bluish hue) than in the core.

Potato plantations, where one is grown with magnetic water and the other without, look different from each other. The plot with the use of magnetic water, is much greener, with a large saturation of chlorophyll and with a higher tangible yield.

The results that Panayiotis has achieved by using the magnetic device;

## Onion

Magnetic Water    Normal Water

## Potato

Normal Water

Magnetic Water
